What is Measuring Up?
The purpose of a state report card is to provide the general public and policymakers with information they can use to assess and improve postsecondary education in each state. Measuring Up 2008 is the fifth in a series of biennial report cards.

The report card grades states in six overall performance categories: Preparation: How adequately does the state prepare students for education and training beyond high school? Participation: Do state residents have sufficient opportunities to enroll in education and training beyond high school? Affordability: How affordable is higher education for students and their families? Completion: Do students make progress toward and complete their certificates or degrees in a timely manner? Benefits: What benefits does the state receive from having a highly educated population? Learning: What is known about student learning as a result of education and training beyond high school?

Grades compare the current performance of each state with the best-performing states, but do not compare with past performance. Key indicators (back page) allow states to compare current performance with past performance.

Missouri’s fairly low performance in educating its young population could limit the state’s access to a competitive workforce and weaken its economy.

- Eighth graders perform well in science, but their scores in math and reading are fair, and their performance in writing is poor.
- High school students score poorly on Advanced Placement tests, but fairly well on college entrance exams.

College opportunities for Missouri residents are only fair.

- The likelihood of enrolling in college by age 19 is fair, and a low percentage of working-age adults are enrolled in higher education.
- Twenty-seven percent of black young adults are enrolled in college, compared with 36% of whites.

Higher education has become less affordable for students and their families.

- Poor and working-class families must devote 41% of their income, even after aid, to pay for costs at public four-year colleges.
- Financial aid to low-income students is low. For every dollar in Pell Grant aid to students, the state spends only 29 cents.

Missouri performs well in awarding certificates and degrees.

- Fifty-six percent of college students complete a bachelor’s degree within six years.
- Only 40% of blacks graduate within six years, compared with 58% of whites.

A fairly small proportion of residents have a bachelor’s degree, and this weakens the state economy.

- Sixteen percent of blacks have a bachelor’s degree, compared with 28% of whites.
- If all racial/ethnic groups had the same educational attainment and earnings as whites, total annual personal income in the state would be about $4 billion higher.

Like all states, Missouri receives an “Incomplete” in Learning because there is not sufficient data to allow meaningful state-by-state comparisons.
**CHANGE OVER TIME: KEY INDICATORS Missouri 2008**

This page reflects Missouri’s performance and progress since the early 1990s on several key indicators.

**PREPARATION**

The percentage of young adults in Missouri who earn a high school diploma has remained stable since the early 1990s. High school completion equals the U.S. average but is below the top-performing states.

**PARTICIPATION**

College enrollment of young adults in Missouri has improved since the early 1990s. The state is slightly above the national average but below the top states in the percentage of young adults enrolled.

The enrollment of working-age adults, relative to the number of residents without a bachelor’s degree, has declined in Missouri—as it has nationally and in the best-performing states. The percentage attending college in Missouri is slightly below the U.S. average and well below the top states.

**AFFORDABILITY**

The share of family income, even after financial aid, needed to pay for college has risen substantially. To attend public two-year colleges in Missouri, students and families pay less than the U.S. average but more than those in the best-performing states. To attend public four-year colleges, they pay more than the national average.

**COMPLETION**

The number of undergraduate credentials and degrees awarded in Missouri, relative to the number of students enrolled, has increased since the early 1990s. Missouri performs at the U.S. average but is below the top states on this measure.

**BENEFITS**

The percentage of residents who have a bachelor’s degree has increased in Missouri, but is below the U.S. average and well below the top states.
