State has increased or remained stable on the key indicator in the category.

State has declined on the key indicator in the category.

See back page for key indicator by category.

## What is Measuring Up?

The purpose of a state report card is to provide the general public and policymakers with information they can use to assess and improve postsecondary education in each state. Measuring Up 2008 is the fifth in a series of biennial report cards.

The report card grades states in six overall performance categories: Preparation: How adequately does the state prepare students for education and training beyond high school? Participation: Do state residents have sufficient opportunities to enroll in education and training beyond high school? Affordability: How affordable is higher education for students and their families? Completion: Do students make progress toward and complete their certificates or degrees in a timely manner? Benefits: What benefits does the state receive from having a highly educated population? Learning: What is known about student learning as a result of education and training beyond high school?

Grades compare the current performance of each state with the best-performing states, but do not compare with past performance. Key indicators (back page) allow states to compare current performance with past performance.

### Preparation

**2008 Grade** C  
**Change Over Time** Up

Nevada’s fairly low performance in educating its young population could limit the state’s access to a competitive workforce and weaken its economy.

- Eighth graders perform very poorly in math, science, reading, and writing.
- Only 68% of Hispanics have a high school credential, compared with 91% of whites.

### Participation

**2008 Grade** F  
**Change Over Time** Up

College opportunities for young and working-age adults are very poor.

- The likelihood of enrolling in college by age 19 is very low, partly because the state has one of the lowest high school graduation rates in the country.
- Ten percent of Hispanic young adults are enrolled in college, compared with 31% of whites.

### Affordability

**2008 Grade** F  
**Change Over Time** Down

Higher education has become less affordable for students and their families.

- Poor and working-class families must devote 37% of their income, even after aid, to pay for costs at public four-year colleges.
- For every dollar in Pell Grant aid to students, the state spends 48 cents—an increase from two cents in 1993.

### Benefits

**2008 Grade** D  
**Change Over Time** Up

A very small proportion of residents have a bachelor’s degree, and this substantially weakens the state economy.

- Seven percent of Hispanics have a bachelor’s degree, compared with 26% of whites.
- If all racial/ethnic groups had the same educational attainment and earnings as whites, total annual personal income in the state would be about $6 billion higher.

### Completion

**2008 Grade** F  
**Change Over Time** Up

Nevada is one of the poorest-performing states in awarding certificates and degrees, but the state has improved over the decade.

- Only 38% of college students complete a bachelor’s degree within six years.
- Thirty-six percent of Hispanics graduate within six years, compared with 41% of whites.

### Learning

**2008 Grade** I  

Like all states, Nevada receives an “Incomplete” in Learning because there is not sufficient data to allow meaningful state-by-state comparisons.

This page reflects Nevada’s performance and progress since the early 1990s on several key indicators.

**PREPARATION**

The percentage of young adults in Nevada who earn a high school diploma has increased slightly since the early 1990s. High school completion is well below the U.S. average and the top-performing states.

**PARTICIPATION**

College enrollment of young adults in Nevada has improved since the early 1990s. Compared with the national average and the top states, substantially fewer young adults are enrolled in Nevada (in percentages).

**AFFORDABILITY**

The share of family income, even after financial aid, needed to pay for college has risen substantially. To attend public two-year colleges in Nevada, students and families pay more than the U.S. average. To attend public four-year colleges, they pay less than the national average but more than those in the best-performing states.

**COMPLETION**

The number of undergraduate credentials and degrees awarded in Nevada, relative to the number of students enrolled, has increased since the early 1990s. However, Nevada is considerably below the U.S. average and the top states on this measure.

**BENEFITS**

The percentage of residents who have a bachelor’s degree has increased in Nevada, but is well below the U.S. average and the top states.

**PARTICIPATION**

The enrollment of working-age adults, relative to the number of residents without a bachelor’s degree, has declined in Nevada—as it has nationally and in the best-performing states. The percentage attending college in Nevada is below the U.S. average and well below the top states.
